The sequence contained an oligo-dT track that was present in the oligonuclecuide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized cervix library cDNA Library Preparation: M.B. OM nucleic - nucleic search, using sw model

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AC145861 175370 bp DNA linear HTG 01-AUG-2003 Pan troglodytes chromosome UNK clone RP43-21D9, \*\*\* SEQUENCING IN PROGRESS \*\*\*, 39 unordered pieces. 1680 1717 AC145861 AC145861 G1:33386791 HTG; HTGS\_PHASE1. Pan troglodytes Pan troglodytes Bukaryotes, Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Butheria; Primates; Catarrhini; Hominidae; Pan. Direct Submission Submitted (01-AUG-2003) Genetics, Genome Sequencing Center, 4444 Forest Park Parkway, St. Louis, MO 63108, USA 1718 AGAGTAGATTGACTTCAGTCCCTACAAATGTACAGTCTTGTATTACATTGTTAATAAAG AGAGTAGATTGACTTCAGTCCCTACAAATGTACAGTCTTGTATTACATTGTTAAAAAG GITITITITITIGITGITGITGITTITITITITITICIGIAAAAGATGGCACTTAAAACCCAAA NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. 5345: contig of 5345 bp in length 5445: gap of unknown length 17195: contig of 11750 bp in length 17295: oottig of 11750 bp in length 33250: contig of 15955 bp in length 33350: gap of unknown length 45646: contig of 12595 bp in length 45746: gap of unknown length 61992: contig of 16246 bp in length 61992: contig of 16246 bp in length f unknown length g of 16246 bp in length f unknown length g of 1331 bp in length f unknown length g of 1143 bp in length 1 (Dates 1 to 1733/0)

AC147556 185215 bp DNA linear HTG 17-DEC-2003 Mus musculus chromosome UNK clone RP23-480N14, WORKING DRAFT SEQUENCE, 11 unordered pieces.

AC147556 CI:39979584
HTG; HTGS PHASE1; HTGS DRAFT; HTGS\_FULLTOP.

Mus musculus
Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mamania; Eutheria; Rodentia; Sciurognathi; Muridae; Musinae; Mus.

Milson,R.K. RESULT 4 AC147556 LOCUS DEFINITION

The sequence of Mus musculus clone Unpublished (base 1 to 185215) Wilson, R. K. ACCESSION VERSION KEYWORDS SOURCE ORGANISM REFERENCE AUTHORS TITLE JOURNAL REFERENCE AUTHORS TITLE JOURNAL

Park Forest 4444 Center, Wilson, R.K. Direct Submission Submitted (17-DEC-2003) Genome Sequencing

```
NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                            Sequencing vector: M13; 0%
Sequencing vector: M13; 0%
Sequencing vector: plasmid; 100%
Chemistry: Dye-primer ET; 0% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Pirap; version 0.990319

Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269619.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The Sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature

Center: Baylor College of Medicine Center code: BCM

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html). ONTE: This is a "working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. Center project Information

S Rat Genome Sequencing Consortium.

Direct Submission

AL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:23115278.

On May 13, 2003 this sequencing reads assembled using Atlas and whole genome shorgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contient, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs are ordered and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence reads. Both end sequence and whole genome shorgun sequence and whole genome shorgun sequence and whole genome shorgun sequence and whole genome shorg ....- Genome Center

This sequence encodes the mouse CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare ingredient a substance capable of potentiating cXCR4, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a

                                                                                                                                                                                                          The present sequence encodes a murine CXC chemokine receptor which binds to the mouse CXC chemokine pre-B cell stimulatory factor PBSF/SDF-1. The mucleic acid is isolated from mouse pre-B cell line DW34. The receptor and cells expressing it can be used in the study and mapping of the mechanism of HIV infection and in screening of potential inhibitors of HIV infection and the development of AIDS

Girdlestone J;

The present invention relates to a new polypeptide capable of binding to a nucleic acid comprising a receptor nucleotide sequence which can function as a receptor for virus infection or is involved in an immune response. The molecules of the invention are useful in the treatment or prevention of a disease caused by a virus or of a disease associated with an immune response. Particularly an autoimmune disease. The zinc finger polypeptide capable of an immune response. The nucleic acid encoding such a polypeptide can be used to modulate transcription of a receptor nucleotide sequence. The nucleic acid sequence comprising a receptor nucleotide sequence comprising a receptor nucleotide sequence of binding to a nucleic acid sequence comprising a receptor nucleotide sequence, where the receptor is capable of functioning as a receptor for infection by the virus or is involved in an immune response, or a nucleic acid encoding such a polypeptide in an immune response. The polypeptides may further be used to treat or prevent various diseases caused by a virus or of a disease associated with or caused by malfunction of the receptor as the TNFR1 receptor, such as autoimmune attrities or myocardities. The present uncleic acid sequence represents a contract or attrities or myocardities. The present uncleic acid sequence represents a contract or as described in the invention

CXCR4-potentiating agents and methods useful for inhibiting neovascularization, and treating solid cancers.

Disclosure; Page 48-49; 63pp; Japanese.

This sequence encodes the human CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           720
                                                The invention relates to human CXC chemokine receptor 4 (CXCR4)-specific antisense oligonucleotides (AAA61652-A61654). The oligonucleotides hybridise with the CXCR4 gene and/or CXCR4 RNA, thereby preventing its expression. As CXCR4 plays a role in HIV infection, the antisense oligonucleotides act as inhibitors of this process. Compositions containing the antisense oligonucleotides are useful as prophylactic therapeutic agents for HIV infection. Such compositions are highly efficacious for inhibiting infection with HIV. The present sequence represents a human CXCR4 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       571

                                        This sequence represents a CXCR4 coding sequence. The invention relates to antisense oligonuclectides that hybridise specifically with chromosomal DNA and/or RNA encoding a CXCR4 protein, and inhibit the expression of the CXCR4 protein. The antisense oligonuclectides can be used in an anti-HIV agent. The oligonuclectides and the anti-HIV agent are highly effective as a preventive and treating agent for HIV infection
                                                                                                                                                                                                                                                                                                                                                                                 151

Treating or preventing reduced bone mass, e.g. osteoporosis, by reducing the level of neuropeptide Y activity in blood or cerebrospinal fluid.

Example 7; Page 84-85; 102pp; English

The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering the a mammal a compound that lowers the level of neuropeptinde Y (NPY) in the serum or cerebrospinal fillud (CSF) or a compound that lowers the level of inositol phosphate (IP) or extracellular signal-regulated kinase (ERK). The method is specifically used to treat (including by gene therapy) or prevent osteoprosis, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in sequence is a human NPY 33 receptor DNA

An antibody for the treatment or prevention of HIV-infection comprises gpl20 portion which binds to DC-SIGN or is exposed upon gpl20 binding o DC-SIGN due to concomitant conformational change. WPI; 2001-602565/68.

g 4

Disclosure, Page 126-127; 131pp; English

The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans dendancement of HIV entry into a T cell or macrophage facilitated by infection. The present sequence represents a human polynuclectide, which is used in the course of the invention

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha.

Disclosure; Fig 1; 26pp; English.

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stromal cell-derived factor lalpha (SDF1a). The method is used for stimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherecises. Estenosis, ischaemic stroke and spinal cord injury. Inhibition of this process is useful in treatment and prevention of a very wide range of diseases, such as, infection (by acteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, catchinary retention, dispersension, uninary retention, deteoporosis, anginal pectoris, myoertension, uninary retention, oteoporosis, anginal pectoris, myoertension, uninary retention, oteoporosis, anginal pectoris, myoertension, uninary retention, oteoporosis, anginal pectoris, catchinary retention, deteoporosis, inflammatory diseases, theumatoid arthritis, diabetic retinopathy, inflammatory disease, therosclerosis, restenosis, Alzheimer's disease, congestive certicipate, cardiac remodeling, angiogenic diseases, solid tumours, and Kaposi Sarcoma. This sequence encodes the human CXC chemokine

gene;

Detecting angiogenesis-associated transcript in a cell for diagnosing and treating cancer by contacting a sample with a polynucleotide that exhibits changes in expression level as a function of time in tissue undergoing angiogenesis.

Example 2; Page 217-218; 291pp; English

The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polynucleotide sequences given in the specification. These angiogenesis-associated polynucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis in the method and the polynucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynucleotide sequences are also useful in the gene therapy of such disorders. The sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polynucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation. sednences

New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma. Ξ Takashi BT, Teh WPI; 2003-040679/03 Rhodes D,

ANDEL INST

Claim 35; Page 132-133; 179pp; English.

The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to muchalic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-CC) microard that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human cDNA sequence up-regulated in CC-RCC patients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                          The present sequence encodes human chemokine receptor CXCR4. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The provise is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TTCATCATCTTCTTGACTGGCATAGTCGGCAATGGATTGGTGATCCTGGTCATGGGTTAC

Human CXC chemokine receptor 4 nucleotide SEQ ID NO:75,

G protein-coupled receptor, GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; descentives disease; diabetes; graft versus host disease; barkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; hypertension; hypertension; renal disorder; rheumatoid arthritis; trauma; ulcer; gene; ds.

(LIFE-) LIFESPAN BIOSCIENCES INC

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.

Disclosure, Fig 1; 523pp, English.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acid be described: (1) an assay for the detection of a particular growth of the complex of and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulaters and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies realso useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for corresponding GPCRs. The antigenic peptides for creesence or absence of corresponding GPCRs. The antigenic peptides for presence or absence of corresponding GPCRs. The antigenic peptides for creating immune-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, atheroscreporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, onten disease, multiple sclerosis, pain, psoriasis, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder, the moder of antibodies may be used in immunoassays and immunodiagnosis, obseity, nausea, hypotension, charles and immunodiagnosis. ABZ42523 to ABZ4269 encode GPCR proteins given in ABP81675 to ABBA2523 to ABZ4269 encode cemplification of the present invention ABZ42642

Use of a CXC chemokine receptor 4 (CXCR4) inhibitor, for modulating cellular adhesion or inhibiting proliferation, movement, or morphological change in a small cell lung cancer (SCLC) cell population, or for treating a subject having SCLC

Disclosure, SEQ ID NO 1; 78pp; English

The invention relates to methods and compositions for inhibiting small cell lung cancer (SCLC) proliferation and metastasis through modulation of the activity or expression of CXC chambakine receptor 4 (CXCR4), and coptionally, that of the tyrosine kinase receptor c-Kit. Administration of CXCR4 innibitor modulates cellular adhesion and inhibits cellular copy proliferation, motility, and morphological changes in an SCLC cell.

CXCR4 inhibitor modulates cellular adhesion and inhibits cellular copy lation. The invention is based on the finding that CXCR4 is copylication. The invention also discloses methods of screening for CXCR4 inhibitors; complete and also discloses methods of screening for CXCR4 inhibitors; conterming whether a sample of lung cancer cells expresses CXCR4 and c-Kit is is therefore amenable to treatment with a combination of a CXCR4 inhibitor and a c-Kit inhibitor; and a method of assessing whether CXCR4 inhibitor and a c-Kit inhibitor; and a method of assessing whether CXCR4 inhibitor and a c-Kit inhibitor; and a method of assessing whether CXCR4 inhibitor and c-Kit inhibitor combination therapy should be continued, by determining CXCR4 (and optionally c-Kit) activity in two or more consumption and an optionally c-Kit) activity in two or more the methods of the invention are useful for treatment with agents of tree invention are useful for treatment with agents of the invention are useful for treatment with agents of the invention are useful for treatment with agents of the invention are useful for treatment with agents of the invention are useful for treatment with agents of the continued should be continued. The present sequence represents cDNA encoding human continued in methods of the invention of the invention. ¥8888888888888888888888888888888

S Sequence 5, Application US/09582224A

Patent No. 6429308

GENERAL INFORMATION:

APPLICANT: IJIMA, Osamu

APPLICANT: SHIMADA, Takashi

TITLE OF INVENTION: HIV Infection Inhibitors

FILE OF INVENTION: HIV Infection Inhibitors

FILE OF INVENTION: HIV INFECTION INDER: US/09/582,224A

CURRENT APPLICATION NUMBER: US/09/582,224A

CURRENT APPLICATION NUMBER: PCT/JP99/06534

PRIOR FILING DATE: 1999/11/24

NUMBER OF SEQ ID NOS: 5

SOOTHWARE: Microsoft Word

SEQ ID NO 5

LENGTH: 1664

TYPE: NAN
                                                                                                                                                                                                                                                               ALIGNMENTS

Sequence 1213, Application US/09023655

Sequence 1213, Application US/09023655

Patent No. 6607879

GENERAL INFORMATION:

APPLICANT: Goods Benjamin G.

APPLICANT: Goods Benjamin G.

APPLICANT: Jeffrey J. Seilhamer

TILLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE

TILLE OF INVENTION: EXPRESSION

NUMBER OF SEQUENCES: 1508

CORRESPONDENCE ADDRESS:

ADDRESSEE: INCTTE PHARMACEUTICALS, INC.

STREET: 3174 PORTER DRIVE

CITY: PALO ALTO

STRATE: CALIFORNIA

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            211
